Name – Prasad Anil Kadam
Roll No. – 11
Course & Code – ETI (316313)
Semester & Code – CO6K
College Name – SIR Dr. M. S. GOSAVI POLYTECHNIC INSTITUTE, NASHIK ROAD

Assignment No. 4
Unit IV: Immersive Technology and Sustainable Computing

Question No.	Question
1.	Immersive technology refers to technologies that create a A) Virtual interactive environment B) Simple text interface C) Only hardware devices D) Networking tools
2.	AR is commonly used in A) Education B) Marketing C) Navigation D) All of the above
3.	VR is widely used in A) Gaming B) Cooking C) Printing D) Email
4.	Haptic technology is related to A) Sound feedback B) Visual feedback C) Touch feedback D) Text feedback
5.	XR stands for A) Extended Reality B) External Reality C) Extra Reality D) Experimental Reality

6.	Which technology overlays digital content on the real world? A) VR B) AR C) MR D) XR
7.	Which technology combines real and virtual worlds? A) MR B) VR C) AI D) IoT
8.	A common device used in VR is A) VR Headset B) Printer C) Scanner D) Keyboard
9.	Virtual Reality completely A) Enhances the real world B) Replaces the real world with a simulated environment C) Uses only sensors D) Works without hardware
10.	AR stands for A) Artificial Reality B) Augmented Reality C) Advanced Reality D) Actual Reality
11.	Google Glass is an example of A) AR device B) VR device C) Quantum device D) Network device
12.	VR requires A) Head-mounted display

	B) Keyboard C) Printer D) Router
13.	Which technology is used in Pokémon Go? A) VR B) AR C) MR D) XR
14.	The main goal of immersive technology is A) Create realistic digital environments B) Increase CPU speed C) Store data D) Improve networking
15.	Haptic gloves are used to provide A) Touch sensation B) Audio output C) Video display D) Storage
16.	Oculus Rift is used for A) AR B) VR C) MR D) IoT
17.	XR includes A) AR B) VR C) MR D) All of the above
18.	VR simulation is commonly used in A) Medical training B) Flight training C) Gaming D) All of the above

19.	Which technology allows users to interact with digital objects in the real world? A) AR B) VR C) Cloud D) Blockchain
20.	Immersive technology improves A) User interaction B) Paper printing C) File storage D) Networking speed
21.	Immersive technology in education helps in A) Interactive learning B) Paper printing C) Typing speed D) Email sending
22.	AR in maintenance helps A) Technicians repair equipment B) Print reports C) Send emails D) Format drives
23.	Architecture uses VR for A) Building visualization B) Email sending C) Data entry D) File compression
24.	Military training uses A) VR simulation B) Word processing C) Email systems D) Web hosting
25.	VR training reduces

	A) Training cost and risk B) CPU speed C) Storage capacity D) File size
26.	In healthcare, VR is used for A) Surgery simulation B) Email C) Networking D) Database storage
27.	AR in navigation provides A) Real-time directions B) Printing options C) Database storage D) File sharing
28.	Immersive technology is used in A) Entertainment B) Education C) Healthcare D) All of the above
29.	VR tourism allows users to A) Visit places virtually B) Travel physically C) Send messages D) Store files
30.	AR in retail helps customers A) Try products virtually B) Print bills C) Send emails D) Connect WiFi
31.	Green computing refers to A) Eco-friendly computing B) Gaming systems C) Fast processors

	D) Network security
32.	Turning off unused devices saves A) Energy B) Data C) Storage D) CPU speed
33.	Cloud computing supports green computing by A) Efficient resource usage B) Increasing energy use C) Increasing waste D) Reducing storage
34.	Green computing reduces A) Carbon footprint B) Electricity C) Hardware D) Software
35.	Examples of e-waste include A) Old computers B) Mobile phones C) TVs D) All of the above
36.	The main goal of green computing is A) Reduce environmental impact B) Increase electricity use C) Increase heat generation D) Increase waste
37.	Recycling of e-waste helps to A) Recover valuable materials B) Increase pollution C) Increase waste D) Reduce recycling
38.	E-waste stands for

	A) Electronic waste B) Energy waste C) Environmental waste D) Electrical wire
39.	A green data center focuses on A) Energy efficiency B) Large size C) High temperature D) More waste
40.	Energy-efficient hardware helps to A) Save electricity B) Increase power consumption C) Increase waste D) Reduce speed
41.	Energy Star program promotes A) Energy efficient devices B) Gaming devices C) Storage devices D) Networking devices
42.	Reducing paper usage supports A) Green computing B) Cloud storage C) Networking D) Programming
43.	Laptop uses less power than A) Desktop computer B) Tablet C) Mobile phone D) Smartwatch
44.	Green computing also improves A) Cost efficiency B) Heat generation C) Waste production

	D) Pollution
45.	Proper disposal of electronics prevents A) Environmental pollution B) Data loss C) CPU errors D) Network failure
46.	Which is a renewable energy source for data centers? A) Solar energy B) Coal C) Diesel D) Petrol
47.	Sustainable computing focuses on A) Environmental protection B) Network speed C) Software coding D) Hardware cost
48.	Data center cooling systems help A) Reduce heat and energy usage B) Increase power consumption C) Increase waste D) Increase noise
49.	Virtualization helps green computing by A) Reducing physical servers B) Increasing hardware C) Increasing heat D) Increasing electricity
50.	Green IT practices include A) Recycling hardware B) Power management C) Virtualization D) All of the above
51.	Quantum computing is based on

	A) Quantum mechanics B) Classical mechanics C) Thermodynamics D) Networking
52.	Quantum computers are still A) Experimental B) Fully commercial C) Obsolete D) Discontinued
53.	Classical computers use A) Bits B) Qubits C) Photons D) Atoms
54.	Quantum computing can improve A) Cryptography B) Drug discovery C) Optimization D) All of the above
55.	Which company works on quantum computing? A) IBM B) Google C) Microsoft D) All of the above
56.	The basic unit of quantum computing is A) Bit B) Qubit C) Byte D) Pixel
57.	Quantum computers are faster for A) Complex calculations B) Printing C) Text editing

	D) Networking
58.	Quantum entanglement means A) Qubits are linked together B) Qubits are deleted C) Qubits are compressed D) Qubits are stored
59.	The property allowing qubits to exist in multiple states is A) Superposition B) Entanglement C) Interference D) Rotation
60.	A qubit can represent A) 0 only B) 1 only C) Both 0 and 1 simultaneously D) Only binary
61.	Superposition allows A) Parallel computation B) Serial computation C) Manual computation D) Slow computation
62.	Quantum supremacy means A) Quantum computer outperforming classical computers B) Faster printers C) Faster internet D) Larger memory
63.	Grover’s algorithm is used for A) Searching databases B) Printing files C) Networking D) Storage
64.	Shor’s algorithm is used for

	A) Factoring large numbers B) Sorting data C) Printing D) Compression
65.	Quantum computing may break A) Classical encryption systems B) Printers C) Routers D) Databases
66.	Quantum computers use A) Quantum gates B) Logic gates C) Network gates D) Software gates
67.	Quantum algorithms are used to A) Solve complex problems faster B) Increase file size C) Print documents D) Store images
68.	Qubits can be implemented using A) Photons B) Ions C) Electrons D) All of the above
69.	Which is not a quantum property? A) Superposition B) Entanglement C) Interference D) Compilation
70.	Quantum computing is useful in A) Artificial Intelligence B) Weather prediction C) Finance modeling

	D) All of the above
71.	Immersive technology enhances A) User experience B) CPU speed C) Printer quality D) File storage
72.	Immersive technologies are part of A) Advanced human-computer interaction B) Networking protocols C) Database systems D) File management
73.	Quantum computing uses A) Qubits B) Bits C) Bytes D) Pixels
74.	Green computing promotes A) Energy conservation B) Energy waste C) Pollution D) Heat generation
75.	VR headset tracks A) Head movement B) Keyboard input C) Mouse click D) Printer output
76.	Green computing reduces A) Environmental damage B) Data storage C) Internet speed D) Software size
77.	Haptic technology provides

	A) Touch feedback B) Visual feedback C) Sound feedback D) Text feedback
78.	Sustainable computing means A) Long-term eco-friendly computing B) Fast networking C) Software coding D) Database storage
79.	AR mainly enhances A) Real-world view B) Virtual-only world C) Storage capacity D) Networking
80.	VR mainly focuses on A) Fully virtual environment B) Real environment C) Hybrid network D) Cloud storage
81.	AR applications include A) Mobile apps B) Gaming C) Education D) All of the above
82.	Green data centers use A) Efficient cooling systems B) High heat C) Waste energy D) Old hardware
83.	Immersive technologies require A) Sensors and displays B) Only CPU C) Only RAM

	D) Only storage
84.	Qubit allows A) Multiple states B) Single state C) Only 0 D) Only 1
85.	Quantum computing is useful for A) Complex problem solving B) Basic typing C) Printing D) File storage
86.	VR helps in A) Skill training B) Simulation C) Visualization D) All of the above
87.	Recycling electronics supports A) Sustainability B) Pollution C) Waste D) Energy loss
88.	Green computing reduces A) Energy usage B) Hardware C) Software D) Networking
89.	XR is an umbrella term for A) AR, VR, MR B) Only VR C) Only AR D) Only MR
90.	MR merges

	A) Physical and digital worlds B) Two networks C) Two databases D) Two programs
91.	AR glasses display A) Digital information over real world B) Only text C) Only images D) Only sound
92.	The future of computing includes A) Quantum computing B) Green computing C) Immersive technology D) All of the above
93.	Immersive technology is part of A) Next-generation computing B) Basic computing C) Mechanical computing D) Manual computing
94.	Quantum computers may revolutionize A) Cryptography B) Medicine C) AI D) All of the above
95.	Haptic devices simulate A) Touch sensation B) Sound C) Vision D) Text
96.	VR gaming creates A) Interactive environment B) Static images C) Text interface

	D) Audio files
97.	VR headsets use A) Motion sensors B) Printers C) Routers D) Switches
98.	Green computing also saves A) Cost and energy B) Data C) Hardware D) Network
99.	Sustainable computing supports A) Environmental protection B) Waste production C) High energy use D) Pollution
100.	Quantum computing is still in A) Research stage B) Fully developed stage C) Obsolete stage D) Declining stage
